Community Involvement

What I hope you take away from this

I love technology and I feel grateful that I can making a living do something that I gladly do for free/fun. I have received so much from the Open Source community that I am honored to be able to give back. I don't have the elitist developer mentality. I seek qualities in others and address them in a way to improve those qualities.

StackOverflow answers

- aws cli not added to path after installation
 - Shows how I don't just give people the answer they seek, but also encourage them to learn how to approach similar future issues.
- How can I copy the output of a command directly into my clipboard?
 - Shows how I follow the Unix philosophy even when writing a simple bash script.
- How can I check if a string represents an int, without using try/except?
 - An example of a "clever" solution to a problem and that I take responsibility for verifying my solutions before I contribute them.
- How do I redirect output to a variable in shell?
 - Shows how I respectfully teach complex concepts.
- How do I parse command line arguments in Bash?
 - Is my most popular answer and I refer back to it nearly every day because I write multiple new tools every single day.
- Returning a boolean from a Bash function
 - Can be considered an example of my approach to coding standards. I don't feel it's productive to
 enumerate rigid rules for my teams (in most cases). I prefer we share an understanding about why
 some things are prone to error or misunderstanding and trust that I hired smart people who can
 choose when to improvise.
- Using the RUN instruction in a Dockerfile with 'source' does not work
 - Is my explanation of not just how, but also why a common Docker problem/pattern should be avoided.
- How to get my own IP address and save it to a variable in a shell script?
 - Is something I share a lot because there are lots of fragile/terrible ways that people approach this need.

- How to sign in kubernetes dashboard?
 - Shows why I love awk for oneliners (and vicariously why I say I like PowerShell's concept of passing objects instead of text streams).
- How to convert string to integer in UNIX?
 - Is a good example of what I mean by "I love to code because it satisfies my curiousity. I'm lucky to get paid for doing something that I'd be doing for free otherwise."
- Why does Vim ignore my modeline values?
 - Shows how I accept and celebrate correction.

GitHub projects

- Raspberry Pi Pre Init for Kubernetes
 - Is something I'm working on to support a curriculum for my Decatur Makers and some local schools. It
 uses my original Pi-Init (basically cloud-init for Raspberry Pi) to create a cluster with no human
 interaction.
- Arduino On-Ramp
 - o Is a class that I teach with Maureen Haley at Decatur Makers.

Gist

- Quick Start Guide for confd
 - I selected confd as preprocessor/templating solution for my team. I wanted them to all get familiar with it, but I felt like the extraneous information in the official documentation was distracting and made it hard to follow. I created an abridged version of the official guide by removing everything but the simplest [file] backend. I am a huge proponent of "Copy-Pasta" (yes,) and always try to include demos that are ready to paste in a shell.

etc

There are plenty more in addition to what's below. (This is what I do when I can't sleep.)
